

SPRAY BOOM

Series SB8400

The EDWARDS SPRAY BOOM enables you to spray both sides of a row at one time in your orchard. The hydraulically adjustable Spray Boom can be extended and retracted to compensate for slight changes in row spacing or when going from one orchard to another. Individual hydraulic cylinders enable each boom to be angled to conform to ground contours or raised to a transport position. The Spray Boom extensions are spring loaded for movement in any direction to prevent damage to trees, irrigation risers or the machine itself. When the Spray Boom is mounted on the Edwards Front Mount 3-Point Hitch, the operator has excellent visibility and precise control of the spray heads.

- Applies spray to both sides of an orchard row in a single pass to save man hours and tractor hours
- Attaches to tractor 3-point hitch or Edwards front mount 3-point hitch
- Hydraulic cylinder adjusts boom width to row spacing
- Individual cylinders control each boom extension for angled adjustment to ground contour
- Spring loaded extensions prevent damage to machine, trees and irrigation risers
- Booms available with square or round extensions for spray nozzle mounting
- Protective guards on extensions prevent damage to end nozzles
- Also available as a single row unit
