

HYDRAULIC CYLINDERS

Edwards HC Series Hydraulic Cylinders are constructed of high quality materials and workmanship. Shown here are some of the many special types of cylinders manufactured for agricultural and industrial use. Twenty years of experience stand ready to assist you with your standard or special hydraulic cylinder needs.

Standard mounting is clevis both ends. Also available are eyes, threaded rods, flat mounting plates, special pivot tubes, and welded flanges. Double ended construction with single or double piston rods also available.

Cylinders are made from cold drawn honed inside diameter steel tubing. Piston rods are made from hard chrome plated steel which is ground before plating.

Standard construction features "O" Ring seals with back-up washers for normal service. Poly-flex seals are available for maximum service conditions. Rod wipers are standard on all cylinders.

IF YOU NEED SPECIAL CYLINDERS, WE BUILD THEM!
